

# Fitted Severity Model (Severity=14.0%) - Age Distribution

A. Age Distribution of Reported Cases

B. Best-Fit Parameters

| Parameter      | Value  | Interpretation          |
|----------------|--------|-------------------------|
|                |        |                         |
| beta0          | 1.792  | Age intercept (at 12mo) |
| beta1          | 0.270  | Linear age effect       |
| beta2          | -0.021 | Quadratic age effect    |
|                |        |                         |
| severity       | 0.140  | 14.0% (fitted)          |
| reporting_rate | 0.029  | 2.9% report if severe   |
| base_beta      | 3.021  | Transmission rate       |
